NUTRIMENTS
POUR LA VIE

Kent Lewarne joined Nutrients for Life in 2009 when he was asked by a Board member to review the newest curriculum, **Nourishing the Planet in the 21st Century**. As an educational coordinator, Kent connects teachers and students to the foundation's available resources and attends teacher conferences and industry events to further raise awareness of the foundation.

Kent graduated from Brandon University in 1986 and began his teaching career in Manitoba. He has taught middle and high school science for 30 years and his passion is chemistry and biology. Since 2009, Kent has been using Nutrients for Life resources in a variety of ways while teaching.

Kent has been involved with the schools environmental education club for over 15 years and currently coordinates a river monitoring project across Manitoba as well as a Ducks Unlimited Wetland Center of Excellence.

“Using the 4R Nutrient Stewardship framework is our best chance at feeding an ever-growing population in an environmentally sustainable fashion. I'm excited to spread the word about Nutrients for Life's programs and resources.”
